Visitor Management System

Presales Solution Overview for a Government Multi-Entity Deployment

Next Steps

One secure, unified platform across every entity

THE CHALLENGE TODAY

A government organization and its affiliated entities need to standardize how visitors are registered, approved, and tracked.

Today's manual and fragmented processes create:

- Security gaps and inconsistent screening
- An inconsistent visitor experience across sites
- Limited audit visibility for compliance

THE DESIRED OUTCOME

Centralized & multi-entity

One platform with entity-level autonomy and consolidated oversight for the parent.

Secure & compliant

Aligned to UAE data-residency, security, and data-protection requirements.

Efficient & auditable

Streamlined visitor lifecycle with full traceability end to end.

Five requirement themes drive the solution

Visitor Lifecycle

Pre-registration, secure QR passes, check-in / check-out, self-service kiosks.

Workflows & Access

Multi-level approvals, watchlist screening, badge & credential issuance.

Multi-Entity Platform

Shared platform, per-entity branding & rules, centralized oversight.

Integration

PACS, Active Directory / SSO, email & SMS, HR, Emirates ID.

Security & Compliance

UAE data residency, IA / NESA & ISO 27001 alignment, full audit trails.

Mandatory: Bilingual Arabic / English interface across all visitor-facing touchpoints.

A proven shortlist, confirmed through discovery

LEAD RECOMMENDATION

HID SAFE Visitor Manager

Strongest security posture with on-premises / data-residency flexibility and vendor-agnostic access-control integration.

STRONG ALTERNATIVE

Genetec ClearID

Excellent fit if the client already runs Genetec access control — unifies visitors, doors, and video.

FAST DEPLOYMENT

iLobby VisitorOS

Quickest rollout and best kiosk experience where a UAE-hosted cloud model is acceptable.

Final selection is confirmed via a weighted scoring matrix after discovery. **Alpha Data delivers end to end** — software, kiosks & hardware, integration, cybersecurity, and managed support.

Every risk has a clear, joint mitigation

RISK

Diverse access-control systems across entities

Data-residency constraints on hosting

Multi-entity governance ambiguity

Security accreditation & testing timelines

Hardware supply & site readiness

OUR RECOMMENDATION

Early technical discovery and a PACS integration assessment.

Confirm hosting model upfront; prioritize on-prem-capable products.

Agree ownership, workflows, and licensing model at design stage.

Build VAPT and IA compliance into the schedule from day one.

Confirm hardware scope and site readiness in a joint rollout plan.

A clear path to a costed proposal

STEP 1

Discovery workshops

Align IT, security, and entity stakeholders on current and future state. Define workflows.

STEP 2

Technical deep-dive

Hosting model · access-control systems · number of sites · hardware scope.

STEP 3

Security Alignment

UAE hosting mandate, internal security policies

STEP 4

Detailed proposal

Deliver the solution design, effort estimate, and delivery timeline.

Let's schedule the discovery workshop to turn these requirements into a costed, deliverable solution.
