

Business Requirements Document

Summary	
Business Owner (SME):	The Customer Service and Compliance department
Project Manager (DT):	Aizhan Ism
Data Refresh Frequency	Daily
Requested on	9-Sep-2025
Estimated Effort :	6 weeks
Azure DevOps Ticket:	n/a
Status	In Progress

Project Summary

Section	Description
Executive summary	This project aims to create a Tableau dashboard to analyze credit card complaints data, requested by the Customer Service/Compliance teams. The dashboard will provide visibility into complaint trends, service response metrics, and customer grievance patterns to improve service quality and satisfaction.
Business objectives	The main objective is to deliver actionable insights into customer complaints and service efficiency. By visualizing complaint trends, response timeliness, geographic distribution, and issue categories, the dashboard will support data-driven decisions to enhance customer experience, identify areas for process improvement, and optimize complaint handling.

Background	• The Customer Service and Compliance departments require deeper visibility into customer grievances and resolution performance. Current reporting is fragmented and lacks actionable insights. A centralized, interactive dashboard will allow stakeholders to track KPIs, monitor response times, and identify root causes, enabling improvements in service quality and regulatory compliance.
Scope	• In-scope: Credit card complaints data; KPIs on complaint volume, response timeliness, closure rates, and in-progress cases; complaint categorization by issue, state, company response, submission channel, and daily/weekly trends. • Out-of-scope: Non-credit card complaints, unstructured customer feedback not captured in the complaint system, and non-service-related metrics (e.g., sales or marketing data).
Features	• Complaint Analysis: Identify the most common types of complaints and track their frequency over time. • Response Analysis: Evaluate the efficiency of the companies in responding to complaints. • Geographical Insights: Analyze the distribution of complaints across different regions. • Customer Satisfaction: Examine the correlation between the type of response and customer satisfaction.

Limitations & Risks	• Data Availability: Complaint data must be consistently available and complete across all reporting periods; missing historical records or incomplete complaint attributes may limit trend analysis. • System Source Issues: If complaint data comes from multiple systems (e.g., CRM, call center, web forms), new mappings or integrations may be required, creating potential delays. • Data Accuracy Concerns/Issues: Inconsistent categorization of issues, inaccurate timestamps, or duplicate records could impact KPI accuracy and dashboard reliability. • Data Access Issues: Access to raw complaint data may be restricted due to privacy or compliance regulations, requiring approvals or anonymization before analysis. • Timeline Limitations/Concerns: Dashboard delivery could be delayed if data preparation, cleansing, or integration takes longer than expected. • Data or Project Dependencies: Dependent on IT/BI teams for data extraction and integration; project success also hinges on timely input from Customer Service and Compliance departments. • Resource Availability: Limited Tableau development resources or key-person reliance for data engineering could pose risks if staff are unavailable.

Data Source

credit_card_data.csv

Functional Requirements: Dashboard Filters

Filters: Below filters are available for the end users to drill down/filter the dashboard.

1. YEAR date Complain received : Contains 2015-2021 to filter.
2. Company. Contains list of US companies that received the complain
3. State: US states in abbreviation to filter

BANS and KPIS:

The Tableau dashboard provides a detailed view of:

- Total Complaints and Trends: Track the number of complaints over time, with a focus on rolling 12-month averages.
- Timely Response Rate: Display the percentage of complaints that received a timely response.
- Geographical Distribution: Map of complaints across different states to identify hotspots.
- Top Issues: Visual representation of the most common complaint types.
- Company Responses: Breakdown of how companies respond to complaints.
